Please support HB 4425 and HB 4426.

I have 4 children and as a working parent I would be required to go to the HD for a waiver session 7-8 times per child or up to 28-32 times.

First it is a biased session on vaccine benefits and not risks.

Second parent's are 100% responsible for their child's health, financial, emotional and physical consequences of any adverse vaccine reaction. The state, pharmaceutical industry, vaccine manufacturers, HD Personnel or health care providers take zero responsibility.

Third. Parents that choose to not vaccinate due to religious or philosophical reasons do not take their decisions lightly and most do hundreds of hours of research. If parents has questions, they are able to speak to their doctor who knows their child and health history and make health care decisions for their children.

I personally have done over 1000 hours of non biased research and feel 100% confident in my health care decisions. When I have questions, I seek advice from my trusted health care professionals.

Parents do not need to go to the HD one time for a biased vaccine benefit session let alone multiple times. Doing so is an Infringement of my parental rights.

Thank you, Betty.
